

INTERFLO DYNAMIC RACKS WITH ROLLERS FOR PICKING SYSTEMS FOR THE BEVERAGE INDUSTRY

FAST AND EFFICIENT PICKING AND STORAGE OPERATIONS AT THE DISTRIBUTION CENTERS AND PRODUCTION SITES.

COCA COLA FEMSA- Cimsa is one of the major bottler groups of the Coca Cola System in Mexico and decided to apply the best solutions in the industry to improve the immediate service to their markets by implementing through INTERFLO MEXICO Picking and Replenishing Racks an Dynamic Gravity Flow Storage Rack System for their Warehouse Operations and Product handling operations in Mexico.

With the INTERFLO Picking Rack System they handle Pallets with FIFO access allowing pickers to have continuous access to product and monitor product shelf life. They also optimized the space of their warehouses and increased the storage capacity.

With the INTERFLO Dynamic Storage Systems COCA COLA was able to save space, reduce the investment by optimizing their existing warehouse for several SKUs including mixed products for immediate shipping for the traditional and the modern supply channels.

They handle thousands of packages and were able to combine carton flow racks, Reverse Flow pallet racking systems an dynamic gravity flow to minimize work load and keep picking positions stocked.

BENEFITS WITH THE INTERFLO DYNAMIC GRAVITY FLOW STORAGE PALLET RACKS AND PICKING SYSTEMS:

- ▲ Pallet flow racks are perfect for food, beverage and grocery industries looking to pick oldest inventory first. It is an efficient and cost-effective storage system for managing perishable and time-sensitive products in high-density storage areas.
- ▲ Pallet flow racks are designed and it is the ideal racking system when you have multiple pallets of the same SKU products.
- ▲ Gravity Flow Pallet Racks provide Automatic FIFO material handling.
- ▲ When combined with carton flow racks and Reverse Flow pallet racking systems, you can create an efficient system that uses gravity to minimize workload and keep picking positions stocked.
- ▲ Suitable for handling plastic, wood and different types of pallets.
- ▲ Reduces time for handling pallets. Immediate access to every type of load and / or SKU.
- ▲ Provides efficient use of floor space and minimizes load and unload times.
- ▲ Increases the storage capacity with efficient use of the floor space reducing and eliminating aisles.
