

EATON installed more than 2,000 pallet positions of interflo gravity flow pallet racks and carton flow at their modern facilities in San Luis Potosi, México.

EATON

EATON is a major leader in the Auto part Industry at global scale and continuously innovating products and services.

Given the continuing strength in the North American heavy duty truck market they decide to update their Operations in Mexico and their warehouses and material handling operations with the best solutions in the industry to improve the immediate service to all the satellite plants.

EATON succeeded by implementing through INTERFLO MEXICO Picking and Replenishing Racks and Dynamic Gravity Flow Racks. They Also optimized the space and increased the storage capacity.

EATON improved the handling of plastic and wood pallets with the INTERFLO Dynamic Storage Systems and also improved the handling of different plastic containers in the INTERFLO Carton Flow Systems.

ADVANTAGES OF THE SELECTIVE INTERFLO PALLET RACKS FOR THE ELECTRONICS AND AUTO PARTS INDUSTRIES

- Suitable for Just in Time Material handling operations.
- Flexibility for Kan Ban Operations.
- Adaptability for Lean Manufacturing.
- Automatic FIFO material handling.
- Suitable for handling plastic and metal boxes special containers and different types of pallets.
- Reduces time for handling parts in picking cells assembly and manufacturing lines.
- Immediate access to each type of load and / or SKU.
- Provides efficient use of floor space and minimizes load and unload times.
- Increases the storage capacity.
- Provides more efficient use of floor space reducing aisles.
- Immediate access to the pallets and containers in dynamic systems.
